

Sports and Entertainment Stadium

Vancouver, British Columbia

Located in the heart of Vancouver, British Columbia, this Stadium is home to several professional sports teams and world class events.

The Challenge: In preparation for the Vancouver 2010 Winter Olympic Games, this Stadium underwent a massive revitalization and renovation project. This challenging plan included several areas requiring a new seamless flooring system with outstanding durability and aesthetic appeal. Stonhard was challenged to provide a customized flooring solution with a scope of over 225,000 square feet.

The Stonhard Solution: Utilizing Stontec ERF and Stonclad UT Sealer, the Stonhard Team met this challenge both on time and on budget.

Stontec ERF is an epoxy system designed for use over new and existing concrete floors and can be applied with minimum installation time. This dense, stain resistant vinyl flake system has an extensive range of finishes and colour options. Stontec floors minimize downtime and save critical path time while offering exceptional design options.

Stonclad UT Sealer is formulated to increase abrasion and chemical resistance while improving cleanability. It is easily applied and hardens to an attractive gloss finish.

PROJECT DETAILS

Project:

- Sports & Entertainment Stadium

Area:

- Entrance Ways
- Access Ramps
- Concession Areas
- Vomitoriums

Products:

- Stontec ERF
- Stonclad UT Sealer
