

Winery

Niagara Falls, Ontario

This local Winery is Canada's largest producer and marketer of wine and related products.

The Challenge: This Canadian Winery was working on a cellar expansion project of approximately 15,600 square feet, including 600 feet of coving, and strongly desired to move away from the traditional philosophy of cellars being a dark, industrial and monotone environment.

In addition to requiring outstanding chemical and stain resistance, the client wanted to combine high performance with unique aesthetics. Wine cellars can be especially challenging due to the acids found in wine spills, and with the caustics used to routinely clean the floors.

The Stonhard Solution: The Stonhard team recommended a custom system that would meet all of the specified requirements. In addition, combining the HRI base with the UTS sealer allowed for a more cost-effective solution

Stonshield HRI provides an aesthetically pleasing, slip resistant surface that is also durable, chemical resistant and easy to clean.

Stonshield UTS sealer hardens to an attractive gloss finish and is formulated to increase abrasion and chemical resistance.
