

STONHARD FLOOR SOLUTIONS

Foothills Medical Centre Calgary, Alberta

AREA: MORGUE, IN-PATIENT PHARMACY, RESPIRATOR
SATELLITE PROCESSING

PRODUCTS USED:

- STONSHIELD HRI
- STONSEAL GS7

Foothills Medical Centre (FMC) is the largest hospital in Alberta. It is one of Canada's most recognized medical facilities and Alberta's leading hospital, providing advanced healthcare service to over two million people from Calgary, southern Alberta, southeastern British Columbia, and southern Saskatchewan.

THE CHALLENGE

The Foothills Medical Centre required a safe, slip resistant flooring solution for their morgue area. The new seamless flooring system also needed to be easy to clean and offer protection against impact, and abrasion.

THE STONHARD SOLUTION

Stonhard's seamless, safe and easy to clean flooring systems were the idea solution for this facility. More than 3,600 square feet of Stonshield HRI and Stonseal GS7 were applied in this hospital, along with 430 linear feet of cove base. Stonshield HRI is a durable flooring system with a decorative, slip resistant surface. It offers superior impact resistance and is textured for safety. This seamless system has no joints or seams to harbour dirt and bacteria and resists attack by most acids and alkalis. Stonseal GS7 is a general service coating designed to improve cleanability, and increase stain and abrasion resistance.
